

UV Pure® Case Study	
Application:	Residential Project
Solution:	Upstream® System
Location:	Ontario

Pure, safe water.
Always.

Flow Water Solutions Confirms Upstream®'s Performance with Low UVT Water

CUSTOMER'S PROBLEM

Flow Water Solutions, based in Ontario, Canada, installed an Upstream® in a customer's country home a month ago and has been monitoring performance carefully since. At the time of installation the biggest concern was the low UVT at the site. Due to the home's dug well and the conditions in the surrounding area of Caledon, there was very poor water quality to work with and the UVT was down to 68%.

THE SOLUTION

To address this customer's situation, Hugh Scholz of Flow Water installed an Upstream® 10-50 (10 liters per minute/50 % UVT) and he has reported back that he is very pleased with the results.

THE RESULT

"Just like the Hallett's, all the Upstream's we've installed are operating in a range of challenging situations, even in low UVTs such as one of our customers with 68% UVT. We've installed these Upstream's in a range of UVT and TDS sites and they're all operating beautifully. In fact, we won't sell anything else to our customers. We'll service other products, because other products need lots of servicing, but we just won't sell our customers anything but UV Pure®." Hugh Scholz, Flow Water Solutions.
